

Updated: February 2026

The Lexus UX 300h

- Lexus compact luxury urban crossover with more powerful hybrid system, new digital instrumentation and enhanced safety features
- Higher-capacity lithium-ion battery, increasing total system power by eight per cent
- Higher output and faster acceleration, yet improved fuel consumption and CO₂ emissions compared to the UX 250h
- Fully digital driver's instrument display
- Additional measures to counter noise and vibration
- Extension of Lexus Safety System+ features, including Proactive Driving Assist, Driver Monitor and Safe Exit Assist

Introduction

The UX compact luxury urban crossover, one of Lexus's best-selling models in Europe, received a substantial powertrain upgrade and a series of other detail refinements for 2024. These changes enhanced the dynamics and driver rewards of a vehicle that combines the flexibility of a crossover with the rewarding driving characteristics of a sophisticated hatchback.

The UX 300h hybrid replaced the previous UX 250h and took its place in the Lexus range alongside the UX 300e battery electric model. Together these models play an important role in Lexus's global electrification strategy and the application of new technologies to advance vehicle performance, handling, control and driver enjoyment. With its Lexus Electrified vision, Lexus is progressing towards carbon neutrality in a way that makes luxury electrified driving accessible to customers through a variety of powertrain options.

More powerful UX 300h

The most significant change in the UX range was the introduction of the new UX 300h self-charging hybrid model, replacing the previous UX 250h. While retaining the established 2.0-litre petrol engine with its world-class thermal efficiency, the new model adopted fifth generation Lexus hybrid technology features to increase power and enhance performance.

The changes included the introduction of a new, more efficient 60-cell 222V lithium-ion battery in place of the previous 180-cell 216V nickel-metal hydride unit, and a redesign of

the inverter which was changed from a separate unit to be unified with the electric motor. The powertrain upgrade delivers an eight per cent increase in total system output, which rose from 181bhp/184 DIN hp/135kW in the former UX 250h to 196bhp/199 DIN hp/146kW in the UX 300h.

Optimising the level of electric motor assistance to synchronise engine speed with the vehicle speed produces a sense of immediate, linear acceleration, without the engine having to run at high revs. The hybrid system can switch off the petrol engine to run on electric power at speeds as high as 72mph, for example when driving on long downhill slopes.

The 2.0-litre engine plays a key role in the UX 300h's overall efficiency, benefiting from advanced engineering features such as laser-clad valves seats, a precisely designed air intake profile, a high, 13.0:1 compression ratio and a fuel injection system that combines direct and secondary port injection to achieve high-speed combustion. VVT-iE intelligent variable valve-timing with an electric actuator on the intake side enhances driveability while helping reduce exhaust emissions. Engine performance and fuel efficiency are further optimised by a fuel pump with continuously variable capacity and a cooling system that uses an electric water pump, features which reduce internal friction losses. This system also ensures rapid cabin warming on cold days and quicker cool-down when using the air conditioner.

Stronger performance, greater efficiency

Thanks to the increase in power, the UX 300h delivers faster acceleration. The 0-62mph time for the front-wheel drive model was reduced from 8.5 to 8.1 seconds.

Thanks to increased powertrain efficiency and measures to reduce the car's weight, fuel and emissions efficiency was also improved. The WLTP combined cycle rating is 54.3 – 56.4mpg; the respective CO₂ emissions are 113 – 119g/km, according to model grade.

Enhanced driving dynamics

Faster acceleration in the UX 300h is complemented by more composed driving dynamics that reinforce the Lexus Driving Signature qualities of control, confidence and comfort at all times. The car underwent rigorous testing at Lexus's new Shimoyama development centre, to ensure drivers on all kinds of roads will appreciate the same enhanced manoeuvring stability, ride comfort and cabin quietness.

Body roll is better damped during hard cornering and the car's posture is even more stable under braking, with front and rear brakeforce distribution and independent pitch and roll

control on each wheel. This technology enhancement produces a linear braking feel under initial braking and keeps the car composed under heavy braking, giving the driver a reassuring feeling of all four wheels maintaining strong contact with the ground.

Body rigidity was increased with the addition of a new radiator support brace and stiffening of the lower back panel. These measures support faithful line-tracing with flat body control.

The driver can use the Lexus Drive Mode Select to tailor the driving experience to suit the journey. Choosing Normal mode ensures the best balance of performance and fuel efficiency; Eco mode prioritises fuel and energy efficiency by smoothing throttle response and moderating air conditioning operation; and Sport gives sharper acceleration and adds reassuring weight to the steering feel.

The UX 300h F Sport is equipped as standard with adaptive variable suspension (AVS), which allows for additional Sport S, Sport S+ and Custom drive modes. With the chassis setting in Sport, selecting Sport S+ or Custom modes engages firmer damper settings for a more dynamic driving feel. Custom mode also allows the driver to combine their preferred settings for the powertrain, chassis and air conditioning functions.

Easy to handle, enjoyable to drive

The UX was conceived as a “creative urban explorer,” a vehicle that offers the practicality of a high-riding SUV combined with Lexus’s world-class refinement and engaging driving dynamics. From the moment the driver settles behind the wheel, the UX communicates the feel of an agile luxury hatchback with a driving position with a relatively short hip-to-heel distance, giving the feeling of being closer to the ground than in other SUVs.

The car is built on Lexus’s GA-C global architecture platform, a light and exceptionally rigid structure which gives prompt responses to the driver’s inputs. The 2,640mm wheelbase contributes to a smooth, stable ride and a spacious cabin, while the 5.2m kerb-to-kerb turning radius makes for easy manoeuvring and parking.

The driving characteristics further benefit from the vehicle’s low centre of gravity, helped by the location of the battery – beneath the floor under the rear seats. Lightweight body components also play their part, including aluminium doors, wings and bonnet and a back door made from a composite material.

A quiet and calm cabin environment

A calm and quiet cabin environment is assured, not just when the UX is running on its electric power. Measures were taken throughout the car to avoid or mitigate noise and vibration, from the inherent strength of the vehicle's structure to the strategic placement of sound insulating and absorbing materials and the use of acoustic window glass. The wing liners reduce the intrusive sound of water, stones and dirt thrown up by the tyres

Additional sound-absorbing material is deployed beneath the centre pillars and to the vehicle floor, together with extra vibration-damping from the dashboard coating and in the rear wheel house. Together these steps reduced noise inside the car by 1.7dB.

Fully digital driver's cockpit

The 12.3-inch digital driver's instrument combimeter (F Sport Design Tech grade and above) can be customised for appearance, style, and type of information delivered, creating a seamless and intuitive user experience for accessing information, entertainment, and connectivity. Its appearance changes according to the selected drive mode and its layout can be adapted to suit the driver's personal preferences. The system can save the preferred multimedia, audio, and navigation settings of up to three people. The seven-inch display featured on other model grades is also fully digitised and customisable.

Intuitive multimedia systems

The UX features the latest multimedia systems: according to model grade, Lexus Link Connect with an eight-inch touchscreen display, or, with additional functionality and 12.3-inch screen, Lexus Link Pro (F Sport Design Tech grade and above). As well as being simple to operate, the systems have increased computing power and give quicker response to inputs. Both versions present graphics in high definition for good readability in all lighting conditions.

The voice recognition system includes the option of using the "Hey Lexus" on-board assistant. This responds to voice commands to make it easier to connect to phone calls, operate audio and climate controls and search the internet. It is programmed to understand more conversational terms, to recognise whether it is the driver or front passenger speaking and to distinguish between background noise and commands so that it is not necessary to mute the audio.

To make journey planning easier and help avoid traffic delays, cloud-based navigation is provided as standard, giving access to real-time road and traffic information. Additionally, the Lexus Link Pro system includes embedded navigation, maintaining operation even if cloud connection is unavailable. To make it easy to find out about such things as local parking and charging points, “Hey Lexus” can also be linked to cloud-based information.

The convenience of the multimedia system includes smartphone integration via Apple CarPlay (wireless) or Android Auto (wired). A wireless smartphone charger is provided as standard on all models.

Connectivity also extends to the Lexus Link smartphone app, which allows the driver to remotely lock or unlock the doors, trigger the hazard lights and set the air conditioning to cool or warm the cabin before getting into the car. The app can also check the battery’s charge level, available range with the air-conditioning on or off and time remaining until charging is complete.

Interior finishes: high quality and craftsmanship

The materials and finishes applied to the UX’s interior are pure Lexus, combining Japanese craftsmanship traditions with innovative production techniques.

Three upholstery options are offered: fabric, Tahara synthetic leather, and genuine smooth leather. The leather and synthetic leather feature a stitchwork pattern inspired by the Japanese *sashiko* (little stabs) quilting technique; the perforated leather displays a hexagonal *kagome* pattern taken from traditional basket-weaving. The dashboard trim (excluding F Sport models) replicates the look of the textured *washi* grained paper familiar from the sliding doors of traditional Japanese houses.

Lexus Safety System+ with extended capabilities

Lexus continues to expand the capabilities of the active safety and driver assistance features with the latest evolution of Lexus Safety System +.

Significant additions were introduced with the 2024 model to help safeguard against common accident risks. Proactive Driving Assist uses the car’s front camera to detect hazards when driving at lower speeds around town, such as parked cars, cyclists and pedestrians walking along the margin of the road or preparing to cross. If there is a collision risk, the system will provide braking and steering to help avoid the obstacle, while keeping the car in its traffic lane.

The UX is also equipped (according to model grade) with rear hazard lights that automatically illuminate at high speed if there is a collision risk with a vehicle approaching from the rear. Also looking to the rear, the Safe Exit Assist gives a visual warning if there is a risk of opening a door into the path of traffic or cyclists coming from behind, sounding an alert if a door is released.

The Driver Monitor uses a camera mounted above the steering wheel which keeps a constant check on the driver's condition. If it detects that they have lost concentration through being tired or unwell, it triggers visual and audible alerts. It is linked to the car's active safety systems, so that should the driver fail to respond, the car can be brought smoothly to a controlled halt with the hazard lights activated (Emergency Driving Stop).

These additions complement the established features of Lexus Safety System+. These include a Pre-Collision System which can detect pedestrians at night and objects such as motorcycles during the day. Lane Tracing Assist helps the driver keep the car centred in its lane and can provide support when driving through bends. Road Sign Assist recognises traffic signs to provide information to the driver via the multi-information display or the optional head-up display. Intersection Turning Assist detects oncoming vehicles, and pedestrians crossing in the opposite direction, when making a turn at an intersection. Emergency Assist, when enabled, makes small corrective inputs to the steering to help prevent the vehicle from unintentionally departing from its lane. And the Dynamic Radar Cruise Control's Curve Speed Reduction automatically adjusts the vehicle's speed to suit the radius of bends in the road.

UK model range

For the 2026 model year, the UX 300h range was revised with a focus on customer preferences.

Entry point is the **Premium** grade which is equipped with: -

- Dark-finish 17-inch alloy wheels
- Heated front seats
- Front and rear parking sensors
- Chrome-finish roof rails
- LED front fog lights
- Rain-sensing windscreen wipers
- Electrically adjustable heated door mirrors with Blind Spot Monitor
- Driver Monitor

- Wireless device charger
- Smart entry – front doors and tailgate

F Sport Design which builds on the Premium specification with: -

- 18-inch F Sport alloy wheels with run-flat tyres
- F Sport exterior styling details
- Tahara synthetic leather upholstery and steering wheel trim
- Rear Cross Traffic Alert with auto-brake
- LED front fog lights and cornering lights
- Rear privacy glass
- Automatic flashing rear hazard lights safety function

The **F Sport Design Tech** model introduces: -

- Fully digital 12.3-inch driver's combimeter and multi-information display
- Lexus Link Pro multimedia system with 12.3-inch touchscreen
- Power tailgate
- Power-adjustable steering wheel

The UX 300h **F Sport** provides: -

- Adaptive Variable Suspension and rear performance dampers
- Additional Sport+ drive mode
- Body-colour wheel arch trims
- Active Sound Control
- Power-adjustable heated F Sport steering wheel with paddle shifts
- F Sport seats with smooth leather upholstery
- F Sport aluminium scuff plates
- Power tailgate
- Eight-way power-adjustable front seats with two-way lumbar adjustment for the driver
- Safe Exit Assist
- Automatic flashing rear hazard lights safety function
- Fully digital 12.3-inch driver's combimeter and multi-information display

The top-of-the range **Takumi** model includes as standard: -

- Body-coloured wheel arch trims
- Three-eye LED headlights with Adaptive High-beam System
- 360-degree Panoramic View Monitor

- Head-up Display
- Heated, auto-dimming and auto-folding door mirrors with reverse-tilt function
- Power-adjustable heated and ventilated front seats – with memory setting for the driver's seat
- 13-speaker Mark Levinson Premium Surround Sound audio
- Aluminium scuff plates
- Sunroof

Up to 10 years/100,000 miles Lexus warranty

In common with every new Lexus, the new UX 300h and the UX 300e are eligible for Lexus warranty protection for up to 10 years or 100,000 miles (whichever comes first). This comprises an initial three-year manufacturer warranty, followed by up to a further seven years of service-activated warranty.

For the first three years of the car's life, owners can have it serviced at a place of their choice. When the new car warranty period expires, they can then benefit from an additional 12 months (or 10,000 miles) warranty when they have their vehicle serviced at a qualifying Lexus workshop, in line with its service schedule. The warranty is provided at no extra cost, up to a limit of 10 years/100,000 miles. Terms and conditions apply; full details are available at www.lexus.co.uk.

UX 300h TECHNICAL SPECIFICATIONS

ENGINE		
Engine type	4 cylinders in-line	
Valve mechanism	16-valve DOHC, VVT-iE (intake)/VVT-i (exhaust)	
Displacement (cc)	1,987	
Bore x stroke (mm)	80.5 x 97.6	
Compression ratio	14.0:1	
Fuel injection	EFI, D-4S	
Total system output (bhp/DIN hp/kW)	196/199/146	
Max. engine power (bhp/DIN hp/kW @ rpm)	150/152/112 @ 6,000
